

The new powerful, user-friendly and modular measuring software

Feature overview

- Measuring software based on DMIS language.
- An integrated solution for measuring prismatic elements of edges and free surfaces.
- Direct import of native CAD formats (PRO-E, CATIA V4, CATIA V5, UNIGRAPHICS) and neutral formats (IGES, VDA, DXF).
- Available for manual, point-to-point and continuous scanning measurement.
- The inspection and reverse engineering of profiles is very fast.
- Powered by strong tools for graphic programming.
- The flexible module for graphical output allows to create custom reports.
- Graphic results output can be exported both in statistical format (QS-STAT and SPC LIGHT) and electronic document (HTML, PDF, MS-WORD, MS-EXCEL, TIFF).
- Extremely powerful use of dual arm measuring system.
- The modern software architecture allows modular development: the integration of custom component is immediate.
